Plot

x | y

Q5

#3

$$F(x) = \int_0^x e^{-t^2} dt$$

} | }

→ Variable:

$$F(x) = \int_0^x t + \cos(t) dt$$

$$= \left[\frac{1}{2} t^2 + \sin(t) \right]_0^x$$

$$= \left(\frac{1}{2} x^2 + \sin(x) \right) - (0)$$

$$\Rightarrow F(x) = \left[\frac{1}{2} x^2 + \sin(x) \right]$$

Family of Anti Deriv

Find the

$$\int x + \cos(x) dx = \left[\frac{1}{2} x^2 + \sin(x) + C \right]$$

$$F(x) = \int_0^x t + \cos(t) dt$$

an antideriv

Plot

$$F(x) = \int_0^x e^{-t^2} dt \text{ over}$$

$$0 \leq x \leq 10$$

x = Insure (0, 10, 1000)

x | y
0 | 0
1 | []

$$F(0) = \int_0^0 e^{-t^2} dt = 0$$

$$F(1) = \int_0^1 e^{-t^2} dt = []$$

for $i = 1 : \text{length}(x)$

$y(i) = \text{simpint}(@f \exp(-t, 1, 2), 0, x(i), 30);$

end

5* Linear Equations Chapter

Note: Read \rightarrow focus: pivot, backsolve, errors, exercises

$$\begin{bmatrix} 1 & 2 & 3 & 4 \\ -1 & 2 & 1 & 1 \\ 4 & 3 & 0 & 2 \end{bmatrix} \quad (rs) \quad \begin{bmatrix} 1 & 2 & 3 & 4 \\ 0 & \boxed{0} & -1 & 2 \\ 3 & 7 & 2 & 10 \end{bmatrix}$$

$S = \#0?$

① $A(i,i)$ is zero? Don't want this

$$\text{b/c } S = A(k,i) / A(k,k)$$

② $A(i,i)$ is small? ← close to zero Don't want this

$$\text{b/c } S = A(k,i) / \underbrace{A(k,k)}_{\text{small?}}$$

Flats $\left[\begin{array}{c} + \\ - \end{array} \right]$ digits $\left[\begin{array}{c} \text{Power} \\ 10 \end{array} \right]$ $\left[\begin{array}{c} S \\ \text{large} \end{array} \right]$

Pivot (row swap) to get the $A(k,k)$ value to be the largest in its col.

$$\begin{bmatrix} 1 & 2 & 3 & 4 \\ 2 & 7 & 1 & 2 \\ \textcircled{-4} & 3 & 2 & 1 \end{bmatrix}$$

for $i = 1 : n-1$

→ $\left[\begin{array}{l} [M \ N \ m_i] = \max(\text{abs}(A(i:n, i))); \\ m_i = m_i + i - 1; \\ A([i \ m_i], :) = A([m_i \ i], :); \end{array} \right]$
} gauss
