How to install Java and Java Fonts - Mac OS X.

1) In the Apple Menu, click Software Update.

2) Install all updates following the instructions as they appear.

3) Repeat step 1 until there are no new updates.

4) In Finder, select Go, Computer

5) Open (double click) your primary hard drive (mine is named Macintosh HD - yours may have a different name)

6) Then open each of the following folders (each is inside the previous one) /System/Library/Frameworks/JavaVM.framework/Home/lib/fonts/

7) Select all of the fonts in this folder and double click to open them.

8) An application called Font Book will open the fonts and show them to you in a few windows. Click Install Font in each window, then close the window (click the red circle). When you have installed them all, you can Quit Font Book.
